EDUCATION

Rizvi College of Engineering

B.E. in Artificial Intelligence
and Data Science

Jun 2025 | Mumbai, India

SKILLS

Programming Languages

SQL | Python

Databases and Data

Warehousing

MySQL | SQL Server | Google

BigQuery

Data Analysis and Visualization

Excel | Power BI Desktop | Power BI
Service | DAX | Data Modeling

ETL and Data Integration

Power Query | Power BI Dataflows |
Python Automation

Cloud and Data Engineering

Azure Data Lake Storage (ADLS) |
Azure Data Factory (ADF) | Azure
Synapse Analytics | Azure SQL
Database | Microsoft Fabric |
PySpark

Generative AI

Prompt Engineering | LLM
Integration

Soft Skills

Problem Solving | Teamwork |
Communication

COURSEWORK

- **Database Management Systems (DBMS)**
- **Probability and Statistics**
- **Data Visualization**
- **Big Data Analytics**
- **Machine Learning**

CERTIFICATIONS

- **Google Data Analytics Professional Certificate** | [Link](#)
- **AWS Academy Graduate - AWS Academy Cloud Foundations** | [Link](#)

EXPERIENCE

Tata Motors Ltd | Data Analytics Intern

Jan 2026 - Present | Pune, India

- Collaborated with cross-functional analytics teams to translate business requirements into data-driven solutions.
- Developed the Contractual Service Productivity Power BI dashboard to monitor employee working hours, overtime (OT), working behavioral patterns, and region-wise productivity through interactive visualizations and KPI tracking.
- Created DAX measures, calculated columns, and data models, Performed ETL process using Power Query Editor, and delivered advanced analytical insights through Power BI reports.
- Contributed to Power BI Service by implementing Row-Level Security (RLS) for secure data access and automating ETL processes using Power BI Dataflows.
- Developed an AI-powered Reason Clustering Analysis system to classify root causes in automotive manufacturing operations using SQL, Python, Pandas, and Azure OpenAI SDK.
- Designed a GPT-based prompt engineering pipeline for Part and Issue classification, improving prediction consistency across manufacturing data.

PROJECTS

Finance & Customer Analytics Dashboard May 2026 - Jun 2026

- Developed an end-to-end interactive Financial Analytical solution in Power BI to provide a centralized view and monitor transaction performance, customer behavior, fees, taxes, fraud risk, and Year-over-Year (YoY) business trends.
- Performed ETL Process using Power Query editor, designed a star schema data model, created Time Intelligence based DAX measures, implemented Row-Level Security (RLS) and published dashboards to Power BI Service for secure access and collaboration.
- Delivered analytics solution that reduced manual reporting effort by 75%, improved report generation time by 80%, Enabled real-time KPI monitoring and provided actionable insights.

Data Science Job Trend Analytics Pipeline Jun 2025 - Sep 2025

- Developed an end-to-end Python-based ETL pipeline to process and clean Data Science job postings data, improved data quality.
- Performed SQL operations including feature extraction process, joins, filtering, and creation of views, materialized views to build an optimized analytical dataset for analysis.
- Designed an interactive Power BI dashboard covering Job Market Overview, Skill Insights, and Workforce Insights, to explore hiring trends, in-demand skills, and workforce patterns.

Coffee Shop Sales Analytics Dashboard Feb 2024 - Apr 2024

- Collected and cleaned Coffee Shop Sales data to understand top-selling products, high-performing stores, and revenue trends.
- Performed Excel-based ETL process using Power Query, applied aggregate functions, VLOOKUP, Pivot Table, and KPI Calculations for analysis.
- Designed an interactive Excel dashboard covering Sales Overview, Product Overview, and Store Insights. Enhanced data visibility and reporting efficiency, supporting data-driven business decisions for sales.
