

Finance & Customer Segment Analysis Project

Business Requirements

A “**Finance and Customer Segment Analysis Dashboard**” in Power BI to monitor and analyze overall financial transactions, customer behavior, fees, taxes, and transaction performance across different business segments and regions.

Challenges:

The challenges in tracking:

- Overall transaction growth, financial and Customer performance
- Monthly trends in transaction amounts
- Successful vs Failed transactions
- Customer segment contribution
- Region and State-wise financial performance
- Transaction type profitability
- Gender-based customer analysis
- Year-over-Year (YoY) performance changes

and many more.

Objective:

The objective of this dashboard is to provide a **centralized analytical solution** that helps to -

- Monitor KPIs in real time
- Identify high-performing customer segments and states, regions.
- Analyze transaction patterns and trends
- Track operational fees and taxes
- Understand customer demographics
- Improve financial decision-making and business strategy

The dashboard should allow users to dynamically filter data by:

- Year / Region / Merchant Group / Transaction Size / Occupation

and provide detailed visual insights for business analysis.

KPI Requirements:

1. Overview Analysis Report –

- Total Amount
- Total Transactions
- Transaction Success Rate
- Total Customers
- Revenue per Customer

2. Transaction Analysis Report –

- Total Fee Amount
- Total Tax Amount
- Average Transaction Amount
- Fraud Transactions

3. Customer Segment Analysis Report –

- Total Customers Joined (each year)
- Male Customer %
- Female Customer %
- Average Customer Tenure
